NELSON HYDRO

With the cold weather approaching and electricity usage increasing, we want to share with you tips to reduce your individual electricity and how this saves you money. Collectively, as Nelson Hydro customers, if we reduce our energy usage this winter and especially during those times when we are using the most energy all at once, such as that very cold January day at dinner time, we can reduce our power purchase costs all year round.

How does this work? FortisBC, who we purchase half of our power from, charges Nelson Hydro a fee for the whole year based on our peak load at any given time (that hour in the year when we collectively use the most electricity also known as the “demand on the system”). Nelson Hydro pays for this peak demand over the year, therefore, if we can reduce peak usage, the payment is reduced. We can all play a part in reducing power usage, which could potentially reduce the size and need for rate increases in the future.
